

MPS

Multi-Packaging Solutions Installs Machine #2

The World Leader in Cold Foil Packaging has replaced original Foiltone/OFT Cold Foil Technology with an Eagle Cold Foil System!

In this world, there are Risk takers, Innovators and Followers. MPS leads the world in being a risk taker in cold foil technology from several years ago. Today they are a leader in this technology and have teamed up with Eagle System for the past few years to continue to lead this market.

From Left to right, Doug Cage Pressroom Manager, Chris Ciccimarro Plant Operations Manager and Matt Dickman Regional Director of Operations proudly stand by their New Eagle.

Matt Dickman sent the Eagle Technicians home early, thanking them for a job well done.

The New Eagle System known for being the ONLY fully automatic cold foiler in the world with no programming has many new features since their previous Eagle of 2 years ago. Eagle takes the mechanical effort out of the art of cold foil which allows the operator to concern himself with regular press functions.

EAGLE SYSTEM Cold Foil #2 was installed March 2014 on their KBA 105 10C 2006 series. What was important to MPS was to not cut into regular production time. Install was started on Tuesday and sign off was on Thursday after running their first job.
